

# Bird Checklist

A checklist for  
Lynn Canyon Park

## A Lynn Canyon Ecology Centre Information Sheet

### Local and Visiting Birds

Most of the 91 species of birds on this list are not found in the park at all times. Many are seasonal visitors, and a few are seen only once every few years.

### Lynn Canyon Park is a Temperate Rainforest

Temperate rainforest habitat is dominated by large conifer trees. Douglas-firs, western redcedars and western hemlocks tower over a rich understory of shrubs and flowering plants. The forest in Lynn Canyon Park is second-growth temperate rainforest and most of the larger trees are approximately 90 to 120 years-old. Red-tailed and sharp-shinned hawks nest in the tall trees, 5 species of woodpecker excavate cavities in wildlife trees, and the dense ground cover is excellent habitat for wrens and other songbirds. Fast flowing Lynn Creek is an excellent place to watch for dippers.

Brown Creeper

### Bird watching in the Forest

To see birds in a forested area do the following:

- Dress in dull coloured clothing
- Bird watch alone or in pairs. Groups will not see much.
- Sit still in one place for fifteen minutes or more.
- Choose a place which affords you cover and a good view.
- Do not make quick movements such as pointing or waving.

Black-capped Chickadee

### Legend - For Lynn Canyon Park Only

R - resident all year in the area

S - summer resident, May through August

W - winter resident, November through January

M - migrant, passes through the area in September and October or February through April

C - common, almost always seen

Fc - fairly common, regularly seen

U - uncommon, not always seen

Ra - rare, seen a few times a year

V-ra - very rare, not seen every year

American Dipper

<input type="checkbox"/> Great blue heron	R, U	<input type="checkbox"/> Sooty grouse	R, Ra
